Use Case 1: View Room Status
Scope: System – Hotel Management Software
Goal Level: User Goal
Primary Actor: Desk Clerk
Pre-Condition: User has successfully logged in and has access to the system.
Success End Condition: The system displays a room and their current status (Available, Unavailable-Occupied/Dirty/Maintenance, Room Type).
Main Success Scenario:
1. Desk Clerk selects "Room Status"
2. System retrieves Room Number and Room Type from database
3. System displays as a series of buttons for each room in the hotel
4. Desk Clerk clicks on specific room to check status
5. System retrieves additional status information (Available, Unavailable-Occupied/Dirty/Maintenance) from database
6. System displays the room information on the screen

Extensions:
    None

Use Case 2: View Weekly Room Occupancy
Scope: System – Hotel Management Software
Goal Level: User Goal
Primary Actor: Desk Clerk
Pre-Condition: User has successfully logged in and has access to the system.
Success End Condition: The system displays all the rooms and their occupancies/reservations for the next 7 days. A room with no reservation will be blank.
Main Success Scenario:
1. Desk Clerk selects "Occupancy"
2. System retrieves Room Number and occupancy/reservation status (Guest Name or blank) for the next 7 days from the database
3. System displays room occupancy/reservation information on the screen

Extensions:
    None
